The screenshot shows a Google Meet interface. The main content is a presentation slide titled "My Grand Vision" by Jeannette Wing. The slide text is as follows:

- Computational thinking will be a fundamental skill used by everyone in the world by the middle of the 21st Century.
 - Just like reading, writing, and arithmetic.
 - Incestuous: Computing and computers will enable the spread of computational thinking.
 - In research: scientists, engineers, ..., historians, artists

Below the text is a small video thumbnail of Jeannette Wing speaking, with the caption "Jeannette Wing on Computational Thinking" overlaid in orange text.

The meeting interface includes a top bar with "PK Ahluwalia is presenting", a participant list on the right (You, PK Ahluwalia, Samistha Sahu, Vijay kumar Sanoria, Nivedita Thakur, Anchal Thakur, Nidhi Sharma, Samriti Mehta, Hemrajali Sharma), and a bottom bar with meeting controls (mute, unmute, video, chat, captions) and system information (17:17, 15-02-2021).

Problem 4.8. Calculate λ_{max} for 2,5-dimethylhexa-1,3-diene.
[Ans. The given compound is $\text{CH}_2 = \underset{\text{CH}_3}{\text{C}} - \text{CH} = \text{CH} - \underset{\text{CH}_3}{\text{C}} = \text{CH}_2$
Parent acyclic conjugated diene (217) + 2 alkyl substituents (2 × 5) + double bond extending conjugation (30) = 217 + 10 + 30 = 257 nm]

Problem 4.6. Calculate λ_{max} for the following compounds:

(i) [Ans. (i) Parent conjugated diene + 2 alkyl substituents + 2 ring residues + exocyclic double bond = 217 + 10 + 10 + 5 = 242 nm
(ii) Parent heteroannular diene + 2 ring residues + exocyclic double bond = 214 + 10 + 5 = 229 nm]

1.) Double bond extended conjugation kaise aara hai ? 2) sir agr do rings nhi hai then how is it hetero anular

3:09 pm

424

Parent value for α, β -unsaturated 6 membered cyclic ketone = 215 nm
One ring residue at α -position = 10 nm
Two ring residues at β -position = 18 nm
Double bond exocyclic to two rings = 5 nm
Calculated value = 258 nm
Observed value = 256 nm

Example 4.11. Compute λ_{max} for the structure:

Solution. The given structure represents an α, β -unsaturated six membered ring ketone having a ring residue at α -position and another ring residue at β -position. It has an exocyclic double bond, a double bond extending conjugation and a homoannular diene component.

Parent value = 215 nm
One α ring residue = 10 nm
One β ring residue = 18 nm
One exocyclic double bond = 5 nm
One double bond extending conjugation = 30 nm
One homoannular conjugated diene = 39 nm
Calculated value = 317 nm
Observed value = 319 nm

Example 4.12. Calculate λ_{max} for the following compound:

Solution. The given compound is an α, β -unsaturated five membered ring ketone with a methyl group at β -position, a ring residue at γ -position, a ring residue at δ -position, a double bond extending conjugation and an exocyclic double bond (e) as shown below.

Parent value for α, β -unsaturated five membered cyclic ketone = 202 nm
One alkyl substituent at β -position = 5 nm
One ring residue at γ -position = 12 nm
One ring residue at δ -position = 12 nm

EUROPEAN HEGEMONY.pdf

Close

European hegemony & inter- imperialistic rivalries, conflicts within Europe

* What is imperialism?

- ↳ the practice of establishing its rule and dominance over the economic and political life of the people outside its pale is called imperialism.
- may be done through armed conquest or setting up colonies.
- some countries were exploited even after establishing their sovereignty, political dominance over them. Newly independent but underdeveloped countries are still exploited economically. This process of dominance is known as neo colonialism.
- ↳ the setting of non-carle countries to establish their sovereignty over agricultural countries is called imperialism.
 - it is actually similar to militarism.
- The chief characteristics of imperialistic rule are:
 - the foreign rulers are a minority and try to impose the superiority of their race and culture on the majority of the natives who are backward or suffer from an inferiority complex and have a non-industrial economy.

Plasmodium vivax 10.pdf

LIFE HISTORY OF PLASMODIUM VIVAX

Two hosts which are there in the life history of Plasmodium vivax:

- Man
 - ↳ In man merozoites are formed
 - ↳ Here asexual cycle takes place
 - ↳ It is known as asexual phase (Intermediate host).
- Mosquito
 - ↳ The mosquito is vector
 - ↳ It carries the sexual phase
 - ↳ It is known as sexual phase (Definitive host).

Life history of Plasmodium vivax is divided into three stages:

- Schizogony
- Gametogony
- Oocyst formation

(i) SCHIZOGONY: This is the phase of asexual reproduction.

- ↳ Sexual multiplication does not take place.
- ↳ It takes place only in man.
- ↳ It has two phases:
 - ↳ Exo-erythrocytic Schizogony (Hepatic Schizogony) - takes place in liver.
 - ↳ Erythrocytic Schizogony - takes place in RBC.
