SIMPLE PARENCHYMA TISSUE

PRESENTATION BY: ANSHI SHARMA
BSc 3rd YEAR
Roll No: 192130

PARENCHYMA

CHARACTERISTIC FEATURES OF PARENCHYMA TISSUE

- 1. Parenchyma tissue is the most common type of tissue in plants.
- 2. It is composed of thin-walled, living cells.
- 3. The cells are arranged in a regular pattern.
- 4. The cells are separated by thin cell walls.
- 5. The cells are surrounded by a thin layer of cytoplasm.
- 6. The cells are surrounded by a thin layer of cytoplasm.
- 7. The cells are surrounded by a thin layer of cytoplasm.
- 8. The cells are surrounded by a thin layer of cytoplasm.
- 9. The cells are surrounded by a thin layer of cytoplasm.
- 10. The cells are surrounded by a thin layer of cytoplasm.
- 11. The cells are surrounded by a thin layer of cytoplasm.
- 12. The cells are surrounded by a thin layer of cytoplasm.

Botanical Gardens

A botanical garden is a collection of living plants available for study, research, education and conservation. It offers visitors a chance to learn about the diversity of plants and enjoy the beauty and serenity of garden landscapes.

Role of Botanic Garden:

- To make the plants available for scientific research.
- To display the plant diversity for general public.
- To display the plant diversity of a particular region.

STRUCTURE AND TYPES OF INTEGUMENTED MEGASPORANGIUM

Structure: It is an integumented megasporangium, which is formed by integumentary cells surrounding the nucellus. It consists of two parts: Body and Style.

Parts of the Ovule:

- Base
- Body
- Style
- Integumentary Tissue
- Embryo Sac

Body:

The body is the part of the ovule which is attached to the nucellus. It is divided into three parts: Base, Body and Style.

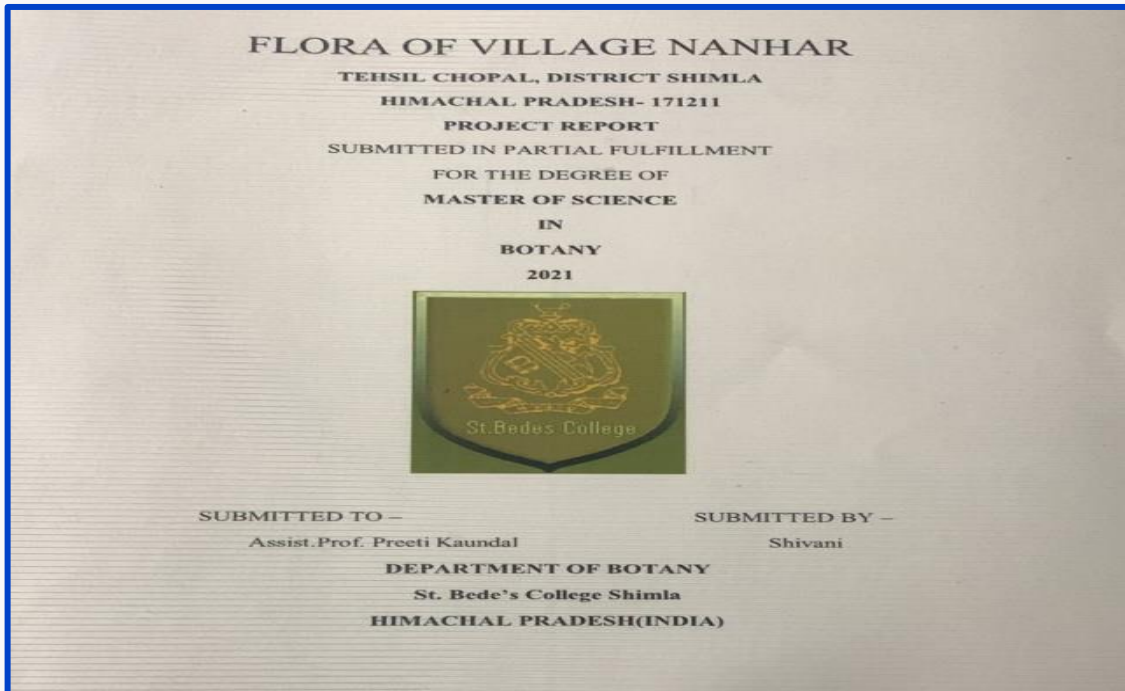

The base is the part of the ovule which is attached to the nucellus. It is divided into three parts: Base, Body and Style.

The body is the part of the ovule which is attached to the nucellus. It is divided into three parts: Base, Body and Style.

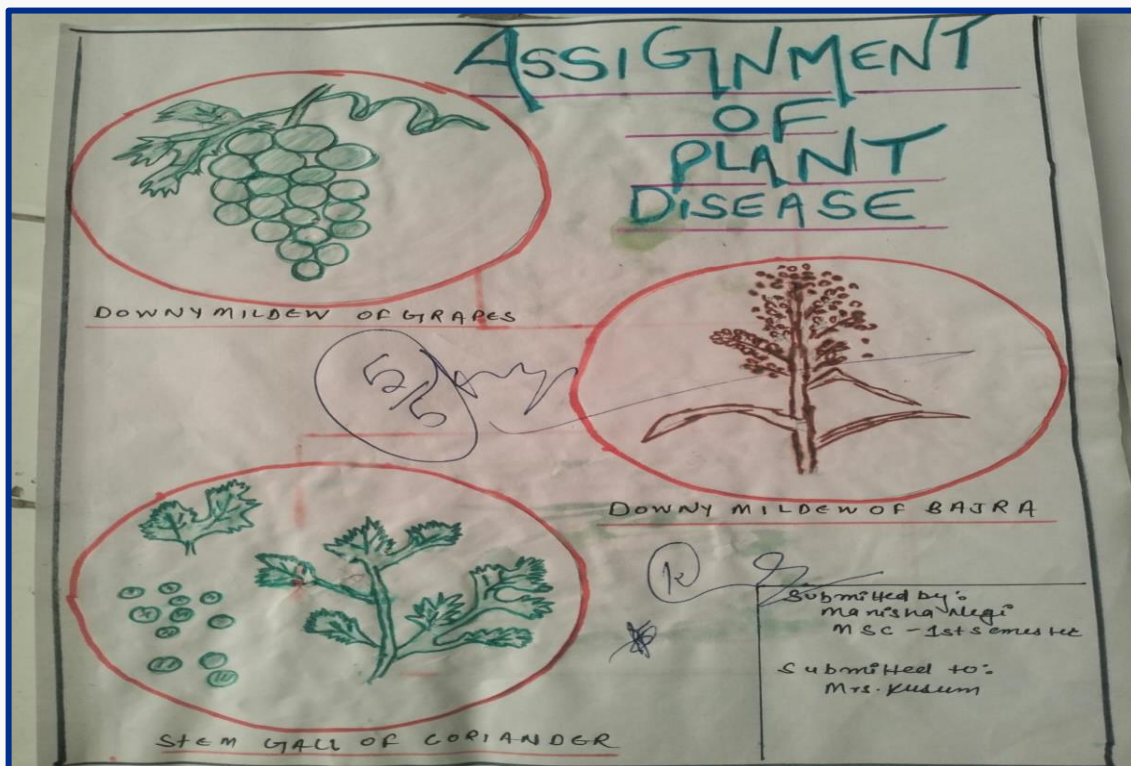

The style is the part of the ovule which is attached to the nucellus. It is divided into three parts: Base, Body and Style.

Ques: Find the mean deviation using mean for the following?
 5, 8, 10, 10, 12, 9

X	$\bar{x} = X - A$
5	5-10 = -5
8	= -2
A 10	0
10	0
12	+2
9	+1
N=54	$\Sigma X = 54$

$\bar{x} = \frac{\Sigma X}{N} = \frac{54}{6} = 9$

By using Mean deviation :-

INCOME TAX

Electronic filing of Income Tax Returns (e-filing)

Advancement in technology has touched our lives in one form or the other. This advancement in technology has made our life much easier as almost everything is available on a click of the button. The government has understood the importance of computerisation and prefer e-filing of all income tax returns rather than the traditional mode of filing paper returns.

WHAT IS ELECTRONIC FILING OF RETURNS i.e. e-filing
 The process of electronically filing income tax returns through the internet known as e-filing or electronic filing.

St. Bede's College Shimla

COMPUTER SCIENCE

CLASS TESTS

The image shows two screenshots from a learning management system. The top screenshot displays the results for a 'Computer Graphics-Minor test' held on June 5, 2021. The results table is as follows:

Name	Status	Feedback	/ 30
Augusty, Charu	Returned		27
Barman, Deepika	Returned		20
Chandel, Anshula	Returned		23
Dogra, Anamika	Returned		26
Gupta, Sakshi	Returned		23
Kaushal, Himani	Returned		25
Raj, Shivalika	Returned		30

The bottom screenshot shows the test questions. The first question is:

1. In 2D translation, which equation is used to move a point(x,y) to the new point (x',y')? (1 Point)

- 1. $x' = x + ty$ and $y' = y - tx$
- 2. $x' = x - tx$ and $y' = y - ty$
- 3. $x' = x + tx$ and $y' = y + ty$
- 4. $x' = x - tx$ and $y' = y - ty$

The second question is:

2. Nicholl Lee Nicholl line clipping algorithm can be extended to 3D clipping? (1 Point)

The bottom screenshot also shows a partial view of the results table for a 'Minor test' held on June 9, 2021:

Name	Status	Feedback	/ 15
Augusty, Charu	Returned		14.5
Barman, Deepika	Returned		13.5
Chandel, Anshula	Returned		14
Dogra, Anamika	Returned		13.5
Gupta, Sakshi	Returned		13
Kaushal, Himani	Returned		13.5
Raj, Shivalika	Returned		14.5

Assignment of History

1.

Buddhism

Buddhism was started by Gautam Buddha who was also known as Jakyamuni and Jathagata.

Gautam Buddha was born in year 563 BC at Lumbini near Kapilavastu district of Nepal on the day of the Purnima (full moon).

His childhood name was Siddharta.

His father's name was King Suddhodhana who was the son of the Saka dynasty and the mother's name was Mahanaya who was the princess of the Kosalan Dynasty.

7 days after the birth of Gautam Buddha died and he was brought up by his step mother Prajapati Gauti who gave him the title of Gautam.

At the age of 16 years Gautam Buddha was married with Yashodhara and had a son named Rahul.

After seeing the sorrow of the world Gautam Buddha decided to leave the pleasures of the life.

Topic: तानसेन Date: _____

अंगीत जगत में तानसेन का नाम इस किवदन्ती पुरुष के अमान लिया जाता है। जिसके विषय में जिन व्यक्तियों को अंगीत से गंदा या बनी प्रेम हो तो वह व्यक्ति भी उनके नाम से गली गमान परिचित होगा जैसे आधुनिक व्यक्तित्व एवं विलक्षण प्रतिष्ठा के चर्ची होने के कारण युगो युगो तक याद किया जाता रहेगा किन्तु इसके का विषय है कि तानसेन के विषय में जिसका कुछ भी कहा गया जाता है अब जनश्रुतियाँ, किवदन्तियों के रूप में अधिक प्रचलित है। जिसके कारण प्रामाणिक रूप से उनके विषय में कुछ भी कह पाना सम्भव नहीं। अनेकानेक मत मतान्तर हैं। जिनके विषय में विश्वाजनो में मतभेद है। वह मतभेद किट चाहे जन्म के विषय में हो या जन्म समय के विषय में या उनके सुश्रुत गान कर्म अपनाने अम्बली या तानसेन की उपाधि के विषय में या फिर सन्तान के विषय इत्यादि के बारे में पाये जाते हैं। ऐतिहासिक दृष्टि से यदि किसी तन्त्र की पुष्टि होती है। तो वह केवल उनका जन में उल्लेख के नवश्रुतियों में शामिल है।

सन् 1562 ई।

अतः किवदन्तियों जनश्रुतियों के आधार पर उपरोक्त मतभेदों को खटने हुए सत्यतः विनमता से ऊँच कक्षियों की जाड़े व पुनः सामंजस्य बिहाने का प्रयास करते हुए तानसेन के अन्वयर्ष निम्न अंशित जीवन चरित देने का प्रयास किया जा रहा है।

ASSIGNMENT - 3

(i) $\psi(x) = \sqrt{a} e^{-ax}$
Probability of finding the particle
 $P(x) dx = \psi^* \psi dx$
 $= \sqrt{a} e^{-ax} \sqrt{a} e^{-ax} dx$
 $= a e^{-2ax} dx$

(i) $x = \frac{1}{a}$ and $x = \frac{2}{a}$
 $P = \int_{1/a}^{2/a} P(x) dx = A \int_{1/a}^{2/a} e^{-2ax} dx$
 $= -\frac{1}{2} [e^{-2} - e^{-4}] = \frac{e^{-2} - e^{-4}}{2}$

(ii) $x = 1/a$ and $x = 1/a + dx$
 $P = \int_{1/a}^{1/a+dx} a e^{-2ax} dx = -\frac{a}{2a} [e^{-2ax}]_{1/a}^{1/a+dx}$
 $= -\frac{1}{2} [e^{-2(1/a+dx)} - e^{-2(1/a)}]$

Assignment - 1
Photoelectric Effect

Q: What is the frequency of a photon whose energy is 50 eV?

$E = h\nu$
Given $E = 50 \text{ eV} = 50 \times 1.6 \times 10^{-19}$
 $h = 6.6 \times 10^{-34}$
then $50 \times 1.6 \times 10^{-19} = 6.6 \times 10^{-34} \nu$
 $\nu = \frac{50 \times 1.6 \times 10^{-19}}{6.6 \times 10^{-34}}$
 $\nu = 1.21 \times 10^{16} \text{ eV}$

● ASSIGNMENT ON FD STATISTICS

1. The number of electrons $n(\epsilon)$ in an electron gas having energies between ϵ and $\epsilon+d$ is given as $n(\epsilon)d\epsilon = (3N/2)\epsilon^{-3/2} \sqrt{\epsilon} d\epsilon / [1 + \{e^{(\epsilon-\epsilon_f)/kT}\}]$. This formula is plotted at three different temperatures $T_1 > 0, T_2 > 0, T_3 > 0$. Looking at these curves arrange the temperatures.

A screenshot of a Google Slides presentation titled "A PRESENTATION ON Solar Cell Technology". The slide is white with black text. The title "A PRESENTATION ON" is at the top, followed by "Solar Cell Technology" in a large, bold, yellow font with a black outline. Below the title, it says "SUBMITTED TO – Dr. SAPNA SHARMA". The bottom of the slide features the heading "SOLAR ENERGY" in yellow, followed by a definition: "Solar energy is simply the light and heat that come from the sun. People can harness the sun's energy in a few different ways. Photovoltaic cells, which convert sunlight into electricity." To the right of the text is an illustration of a solar panel under a sun. The browser tabs at the top include "St Bede's College Shimla", "WhatsApp", "Inbox (725) - sapna...", "Photos - Google Photo...", "Inbox (725) - sapna...", "Inbox (417) - sapna...", and "B.Sc.III (SEC)". Explain method used in psychology

Biological Approach: This approach focuses on biological structure and phenomena such as brain, genes, hormones, endocrine system and neurotransmitter in order to understand the dynamics of behaviour its main focus is on the role of different parts of brain in regular feelings, memories, emotions and other aspects of behaviour, similarly the impact of over secretion or under secretion of different kind of hormones in governing behaviour is studied. Behaviour genetics as one of the sub discipline studies the genetic determinants of behaviour. Moreover this approach looks for physiological basis of human behaviour.

Psychodynamic Approach: The father of psychodynamic approach Sigmund Freud founded on unconscious libidinal energy in describing the present state of the individual. He studied mind in terms of hierarchical arrangements of experience in the form of different layers of conscious (eg. conscious, preconscious and unconscious) Freud explored the nature and quality of unconscious through analysis of dreams, slips of the tongue, neuroses, psychoses, work of art, and rituals. He assumed that majority of human behaviours are triggered by unconscious motivation. Thus to understand the present human behaviour the analysis of unconscious mental contents is considered most important.

Topic: _____ Date: _____

Foundation Of Psychology

Q1. Explain method used in Psychology?

Observation Method
The basic method of psychology, as is the case with any other science, is observation. Earlier psychologists tried to study and explain behaviour by just observing the behaviour and activities of organisms. On the basis of their observations, they tried to find explanations. This type of observation is called natural or non-controlled observation. This term means that the observation was made in natural settings as and when the behaviour occurred. On the basis of repeated observation the psychologists attempted to formulate general laws and principles.
An outstanding example of law based on such natural observations is the laws of association formulated by Locke, Berkeley, Brown and other British philosophers. A deeper level philosopher tried to combine observed with logic and develop psychological theories. Natural observation was employed for a long time for psychology studies.

Advantages of this Method:

- It is easy to collect data and no special arrangements were required.
- By observing behaviour in natural situation are really observing behaviour in life situations.
